INTRODUCTION

This book, one of two volumes in the 1980 Statistical Annual, presents basic information on grains, soybeans and products, silver and gold, iced broilers, and plywood futures.

Record volume of 44.3 million contracts on the Chicago Board of Trade in 1980 reflects the continued—and growing—importance of futures contracts to protect producers and users of commodities. As the center of international grain futures trading, the Chicago Board of Trade provides a means of pricing and protecting cash market positions of producers and users around the world. Agricultural contracts alone accounted for 79.2% of our record volume in 1980.

The size and inherent volatility of the agricultural market demonstrates the importance of futures as a risk-transfer tool. U.S. farm exports alone are expected to rise from the 1980 record of \$41.3 billion to \$48.5 billion in fiscal 1981, a 17% increase.

This book records the detailed price and trading activity which occurred at the Chicago Board of Trade during 1980, as well as cash market information. International production and trade of agricultural products is covered extensively. A thorough index details the book's contents.

Price is a composite reflection of the changing ratio of supply and demand. Historical price data, supplemented by data on the availability and consumption of a commodity, allows commercial and speculative users of futures markets and other students of commodities trading to gain deeper insight into the dynamic nature of futures trading.

On the following pages you will find a complete listing of the high, low and closing futures prices of CBT commodities for each trading session during 1980. Additional tables of weekly, monthly and annual ranges of price—from high to low—provide a quick glimpse of price volatility.

Data on futures trading volume and open contracts (the number of futures contracts not yet closed out by delivery or an opposite transaction) are measures of the strength and liquidity of our markets. These measurements are often analyzed in conjunction with price movements to predict future price trends.

Section 2

Cash Prices

Futures prices represent the market's best assessment of the probable cash value of a commodity at a future date. Futures prices tend to follow the movement of cash prices and as a result, traders in commodity futures watch cash prices closely. Cash commodity prices are influenced by the prices of substitutes and the demand for products using the commodities as inputs.

This section contains daily, weekly and monthly cash prices for CBT commodities in Chicago and other principle market centers. Also presented are weekly and monthly cash prices for meals and oils competing with the soybean complex and selected livestock feed/price ratios which indicate the derived demand for grains used in feed.

Section 3

Shipments Receipts

Physical location of commodities in relation to the place where they are in demand is a critical factor in the making of both cash and futures prices. This section contains reports from the U.S. Department of Agriculture, terminal elevators and transportation agencies which show the physical location and movement of visible stocks in both CBT and related commodities for Chicago and other market centers.

Historical data on the movements of commodity stocks is arranged by mode of transport as well as location.

¹Census export data to Canada overstated since Canada contains major transit ports and ultimate destination was unknown at time of shipment. Transshipment through Canadian ports are mainly destined for Western Europe and Asian Countries. Census data to these countries are understated by the amount of transshipment via Canada.

Section 4Supply and Disposition
Miscellaneous Data

In this section the reader will find data on the production and consumption of commodities for a period of years. Reports include those from the U.S. Department of Agriculture detailing acreage, production and yield of major crops by state. Other reports from the U.S. Census Bureau detail the monthly processing of the major oilseeds and stocks of refined products.

United States agriculture competes with hundreds of commodities from around the world. This section contains historical data on world-wide production and consumption of the major feed grains, which has an impact not only on pricing and profits in the agricultural sector, but also on the U.S. position in the international economy.

The production and consumption of non-agricultural commodities is fully detailed as well.

¹Seasonally adjusted annual rates.

NOTES: Private building permits (for 14,000 areas with permit systems, excluding farm), starts, and completion are Census Bureau data. A dwelling unit is started when excavation begins. In the case of apartment building, all units are considered started at that time; however, all such units are considered completed when more than half of the units in the structures are ready to use. Private mobile home shipments are Mobile Home Manufacturers Association data converted to seasonally adjusted annual rate of Census Bureau.
